Even with today’s technology, walnut cracking remains a challenge to many orchard growers. Manual cracking yields good results, but it’s slow, expensive, and time-consuming. By the time you make it to market, your competitors are already selling their product. Our System covers the entire walnut processing line. From pre-sorting, cracking, through kernel sorting, to shell separation and removal, Our System does it all. Specifications: Kernel output volume: 150kg per hour Kernel output quality: Up to to 50% butterfly shaped kernels. Computer guided controls for: - Cracking depth - Vibration based shell separation - Air separation A single Cracking System can achieve faster results than 10 people cracking manually. A single person can operate Our System, with one or two more people for quality control and small shell removal. In case of interest you can see the video of our walnut cracking system which is available in our website.

We have a large laying of fruit gardens on intensive technology in several countries, including in Uzbekistan. Another area of the company`s activity is the development and	

implementation of innovative technologies in the field of intensive gardening for the laying of intensive orchards “on a turn-key basis” using modern drip irrigation systems for qualitative improvement of fruits, increasing the specific fertility per hectare. To date, our company has built more than 600 hectares of intensive orchards throughout Uzbekistan. Another 400 hectares are at the stage of designing and supplying equipment. All our gardens successfully fructify and bring a stable profit to their owners. We carefully monitor all our gardens to ensure maximum performance over the years.
