Bonegraft is a biotechnology company that focuses on research and development of biomaterials such as bone and cartilage tissue scaffolds and polymeric membranes in the modern laboratory of ISO Class 7 (10,000) clean rooms at Ege University Technology Development Center. Bonegraft specializes in the production of synthetic bone substitutes and barrier membranes. Powerbone products are indicated for use as a bone graft substitute to promote bone tissue formation in non-bearing bone defects created surgically or by traumatic injury. Powerbone products can be combined with autogenous blood and / or bone marrow and other bone grafts. Available in granular, stick, block, wedge, flexible, paste and gel forms for different indications. Terramed is a fully authorized company from the export of Bonegraft. Our aim is customer-oriented and to bring our patients, health personnel and hospitals to the right point with our products and experience.

<p>Our company was established in Turkey, it is working in the field of natural building and insulation materials. With the new material we have developed, it is possible to make very light, carbon footprint almost zero and very well insulated buildings or coating of the buildings. It is possible to combine our material with natural materials (such as hay, pike, reed etc.) and can create buildings with it. It is very economic and easy to produce (for more information please contact with us) because of that it can be produced in low income countries (it is a solution for Africa for example). Our company has brought the material which is currently in the research and development stages, to the mass production stage and application examples have been produced. For the next steps, our company is looking for corporate companies for cooperation. For more information, please contact with us.</p>
